Solution	Paste any message and get a risk score, warning signs and next steps, checked against the live web
Market	A global product, tailored first for Rwanda
Who pays	Free for people; paid by universities, schools and government; financed with telecoms like MTN
Team	The Domari team, Kigali
Grant use	More AI tokens, and new features starting with screenshot and image checks

Scams reach people faster than they can check.

7 in 10

Rwandans were targeted by email, online, phone or text fraud in just three months.

869,249

francs: the median loss for Rwandans who lost money to digital fraud in 2025.

30%+

of reported crime in Eastern and Western Africa is now cyber-related. Phishing scams lead.

Sources: TransUnion Rwanda consumer surveys (Dec 2024, Dec 2025) · INTERPOL Africa Cyberthreat Assessment 2025

The people scammers target most

Students

A "fully funded" scholarship that asks for a processing fee.

Job seekers

A remote job offer that wants a training or equipment fee first.

Mobile money users

An urgent SMS or WhatsApp asking them to send money or a code.

Small businesses and NGOs

A fake grant that demands a "securing fee" before it pays out.

Today’s protection misses the message itself.

Tool	What it checks	What it misses
Email spam filters	Emails in one inbox	WhatsApp, SMS and social media
Caller ID and spam apps	The sender's number	What the message actually says
Link checkers	Web addresses	Fee requests with no link
Awareness campaigns	Teaching warning signs	A check at the moment it matters

FraudShield reads the whole message, from any channel, and explains why.

Paste it. Check it. Stay safe.

01

Paste the message

Copy any suspicious SMS, WhatsApp, email or job post into the scanner.

02

It gets checked

Looks for fees, data requests, pressure and fake promises, then checks the web.

03

Get a clear answer

A risk score from 0 to 100, the warning signs, and what to do next.

Covers fake jobs, scholarships, grants, phishing links, investment scams and suspicious SMS.

A real check from the live app

Message pasted in

"Congratulations! You have been selected for a fully funded scholarship to study in Canada. To secure your slot, pay a processing fee of 50,000 RWF via MoMo to 078×xxxxxx before 6pm today. Do not share this message. Contact: admissions.canada.scholar@gmail.com"

95/100

High risk · Fake scholarship · High confidence

- Asks for an upfront processing fee
- Says "selected" with no application
- Rushes you: pay "before 6pm today"
- MoMo payment to a personal number

Advice: don't pay, block the sender, report to RIB.

Test message written by our team, checked on fraudshield-two.vercel.app on 13 Oct 2026. Result shortened.

Verdicts checked against the web.

1

Message in

Any text: SMS, WhatsApp, email or a job post.

2

Analysis

Gemini 2.5 Flash scores the message on 8 scam signals.

3

Web check

Live search finds matching scam reports and official warnings.

4

Community match

Compared with scams our users have reported.

Result: risk score, scam type, warning signs, next steps and web sources.

The 8 signals it looks for

Fee or money requests
Suspicious contacts

Passwords, OTPs, IDs
Poor grammar

Unrealistic promises
"Selected" unasked

Urgency and pressure
Requests for secrecy

Careful answers people can trust.

Built in today

- Clear risk bands: 0–30 low, 31–70 medium, 71–100 high
- Never calls a message a scam without strong evidence
- Every result shows its web sources and a "guidance only" note
- Users rate each result as helpful or not

Next

- Remove names and phone numbers before storing messages
- Comply with Rwanda's data protection law (Law No. 058/2021)
- Test accuracy on labelled, real Rwandan scam messages
- Publish our accuracy and false-alarm rates

Live, free and in use.

Live product

Free public scanner at fraudshield-two.vercel.app, open 24/7.

Threat database

A scam library, plus a form where users report new scams.

Early users

People we shared it with use it to check messages and say it works.

Selected

AI UNIPOD PanAfrican AI Founders programme, with MIT and Wadhwani training.

Stage: working MVP, pre-revenue.

Works everywhere. Tailored to Rwanda.

5.8M

active MTN mobile money users in Rwanda, our first market.

Works everywhere

Checks messages from any country against the live web.

Tailored to Rwanda

- Spots MoMo payment scams and fake local offers
- Points people to RIB to report scams
- Next: checks in Kinyarwanda
- Next: a database of scams reported in Rwanda

Source: MTN Rwanda results to September 2025 (via ITWeb)

Free for people. Paid by institutions.

Free

People

Students, job seekers and families check messages for free. Every check grows our scam data.

Paid licence

Institutions

Universities, schools and government institutions pay to protect students and staff.

Partner

Telecoms

MTN finances checks to protect its mobile money users and their trust.

Pricing will be set with our first pilot partners.

Why we can win

Data is our trade

Domari labels AI data for international clients, so we can build Rwanda's own scam dataset.

We train our own models

Our team has already trained a model on our own data and deployed it on Hugging Face.

Tailored to Rwanda

It spots MoMo fee scams and points people to RIB, not just global advice.

Answers you can verify

Every verdict links to web sources, so users can see the evidence.

Every scam stopped saves real money.

869,249

francs: what a typical Rwandan victim lost to digital fraud in 2025.

What we will measure and report

- Messages checked each month
- High-risk scams flagged
- Share of users who say a result helped them
- New scams reported to our database
- Students and staff covered by pilots

Source: TransUnion H1 2026 Top Fraud Trends update (Rwanda, 2025 data)

What we deliver, step by step.

Already built: web scanner, threat library, scam reporting and web-verified answers.

Months 1–3

- Paid AI and web search capacity
- Screenshot and image checks, first version
- Hosted database and usage tracking

Months 4–6

- Screenshot checks for chats, SMS and posters
- Checks in Kinyarwanda
- Pilot with a university or institution

Months 7–12

- Our own scam model, version 1
- SMS and USSD checks, with MTN
- First paying institution

Built by the Domari team

Domari Ltd is a Kigali company that builds AI products and AI training data. The whole Domari team builds and runs FraudShield.

Builders

Our developers built FraudShield and have trained and deployed our own model on Hugging Face.

Data experts

Our project managers and data annotators deliver AI training data to international clients.

Based in Kigali

We know the scams Rwandans receive, from MoMo fee requests to fake scholarships.

What this grant unlocks

More AI tokens

A paid AI and web search subscription, so checks stay fast and never stop when free limits run out.

Screenshot and image checks

Upload a screenshot of a WhatsApp chat, SMS, poster or job ad, and FraudShield reads and checks it.

Also looking for pilot partners (MTN, universities, government) and mentors.
